Course objectives
The aim of this course is to give the students an overview about methods and tools to visualise geographical data, with focus on the process and tools of mapmaking, especially maps for GIS and Internet.

Course contents
- How to use different maps
- Map making tools
- Data for maps
- Map layout
- Visual hierarchies
- Map Generalisation and Classification
- Map symbolisation
- Colour and text
- Copyright and liability

In addition the course, an overview of computer based presentation of data such as web mapdesign, geovizualisation and mapping time is offered.

Transitional rules
Transitional rules that will be applied can be found in Assessment procedures at University West (www.hv.se).
